

# BOLORO EXPLORES THE FUTURE OF PAYMENTS AT BARCLAYS RISE

The shift towards advanced technology has given rise to the trend of digital payments, enabling businesses to thrive in a global paperless environment. On March 8<sup>th</sup> 2017, Rise hosted a panel discussion led by Kate Christensen to shed light on the current and future trends of the mobile payments industry. Barclays Rise brings together the world's best and brightest start-ups and experts to create the future of financial services.

Boloro Global and other experts in mobile payments, including Venmo, Seqr, and a former CEO of Shopkeep, gathered to discuss a wide range of topics, including consumer payment trends, fraud and identity risks, payments from the merchants' perspective, and the social impact of mobile payments.

A key takeaway from the discussion was the idea that mobile payments might eventually replace credit card transactions.

Even though the mobile payments industry is growing at a significant pace, there are causes of concern that need to be addressed, such as fraud. Identity verification and fraud prevention are crucial, and **Boloro's CEO Karl Kilb pointed out that Boloro's multi-factor authentication offers an ideal solution. "The key word is trust. How do you ensure somebody really is who they say they are?"**

Boloro's authentication process avoids the Internet, providing a secure, separate channel for authentication.

With meetups and insightful discussions such as these, it is quite certain that the future of mobile payments, which is still a young industry, will be secured.

To listen to the panel on Rise Radio [click here](#).

Boloro Global will again be featured by **Rise on March 28th, at 12:30**, to share further insights in mobile payments. All Rise members are encouraged to join the discussion.

## ABOUT BOLORO GLOBAL LIMITED:

Boloro is a unique, patented, handset neutral multifactor authentication technology and payments network that offers users the ability to securely transact using any kind of mobile phone and account without the need to download any app. Boloro's secure authentication can be applied to any situation where the identity of the customer needs to be verified, including payment transactions. In payments, Boloro replaces cash and offers financial services to the many unbanked in emerging markets, accelerating their financial inclusion and access. Having processed over 50 million transactions, Boloro Global Limited is headquartered in New York City, and currently operates in Africa, South Asia and the Middle East, with expansion into the United States, India and other markets already underway. Boloro is now actively licensing its technology worldwide. For more information, visit [www.boloro.com](http://www.boloro.com).
