

Boloro Authentication Featured at European Digital Banking Summit In Berlin, Germany

Boloro’s authentication solution was featured at the European Digital Banking Summit in Berlin, Germany on November 19, 2019 as a secure, user-friendly replacement for SMS OTP that complies with PSD2 and GDPR. CEO Karl P. Kilb III addressed the Summit and was also interviewed by Spiros Margaritis, VC, Margaritis Ventures. Major banks from across Europe also attended one-on-one sessions with Boloro for demonstrations and discussions on how easy it is to implement the patented process using APIs. The banks were very impressed with Boloro’s unique approach to authentication and with their ability to host, control and brand the solution. “There’s a growing realization that the Internet and Operating System are inherently vulnerable to hacking and malware, and Boloro’s out-of-band messaging provides real security that’s also easy to use and compatible with all mobile phones,” according to Kilb. “We are bringing Boloro’s innovative approach to identity verification and transaction validation to European banks after successfully deploying in other markets, working closely with mobile network operators.”

ABOUT BOLORO:

Boloro licenses its multi-factor and multi-channel authentication platform to banks, governments and others for identity verification and transaction validation, providing a solution that is secure, user-friendly, instantaneous, fraud-free and compatible with any mobile phone, including smartphones and feature phones. Boloro is a member of the GSMA (global association of mobile carriers), and Boloro’s authentication process has been approved by the GSMA.
